PROFILE

Full stack developer with commercial experience building and shipping production features in **TypeScript, React and Node.js**. Comfortable across the stack from PostgreSQL schema design to accessible front-end components, with a habit of writing tests and asking why before writing code. Looking for a junior role in a team that reviews code properly and lets me keep levelling up.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), Python, SQL, HTML5, CSS3

Front end: React, Next.js, Tailwind CSS, React Testing Library, responsive and accessible (WCAG 2.1 AA) UI

Back end: Node.js, Express, REST APIs, PostgreSQL, Prisma, Redis, authentication (JWT, OAuth 2.0)

Testing and tooling: Jest, Vitest, Playwright, Git, GitHub, GitHub Actions, ESLint, Docker

Cloud and infrastructure: AWS (EC2, S3, RDS), Vercel, Railway, CI/CD pipelines

Ways of working: Agile/Scrum, code review, pair programming, Jira, Figma handoff

EXPERIENCE

AI/Machine Learning Product Contributor — Alignerr, Remote

November 2025 – Present

- Contribute to machine learning product development through data annotation and AI model alignment across live Code Bench environments.
- Support Code Reinforcement Learning (Code RL) initiatives, annotating real-world programming tasks to improve model performance.
- Deliver Greenfield “vibe coding” annotations across multiple large language models.

Software Developer Intern — BlueBow Group, London

February 2025 – August 2025

- Built and shipped **8+ user-facing features** in a React/TypeScript codebase serving around 30,000 monthly users, working to two-week sprints alongside three senior engineers.
- Rewrote the customer dashboard's data-fetching layer with React Query, cutting average load time from **3.1s to 0.8s** and removing a class of stale-data bugs that had generated roughly 15 support tickets a month.
- Designed and built a REST endpoint set for the billing module (Node, Express, PostgreSQL), including input validation and role-based access control; still in production.
- Raised unit test coverage on the payments service from **34% to 76%**, catching two regressions before release.
- Reviewed teammates’ pull requests weekly and wrote onboarding documentation now used by every new starter.

Web Developer — Acumen Digital, Nigeria

September 2023 – June 2024

- Delivered five client websites (Next.js and headless CMS) end to end: scoping, build, deployment and handover.
- Rebuilt a local restaurant's ordering flow, increasing completed online orders by **around 22%** in the first two months.
- Developed and integrated REST APIs with appropriate request validation, error handling, and access controls.
- Managed client relationships and deadlines independently, translating non-technical requirements into scoped tickets.

Shift Lead — Marks & Spencer, London

December 2024 – July 2026 (part-time then full-time, alongside studies)

- Resolved around 60 customer issues daily.
- Led and supported colleagues in a fast-paced retail environment, maintaining service standards and operational performance during high-pressure periods.

- Monitored team performance against daily targets, addressed operational issues, and adapted priorities to ensure successful delivery.
- Built an internal spreadsheet automation in Python that cut a weekly reporting task from **two hours to ten minutes** — my first taste of building something people used.

PROJECTS

ADHD Note-Taking System

React.js, Node.js (AWS Lambda), DynamoDB, Cognito | Code: github.com/

- AI-powered note-taking platform designed for users with ADHD, using structured note organization, intelligent summarisation, and actionable task extraction.
- Built secure authentication, real-time note syncing, and semantic search, enabling users to quickly capture, organise, and retrieve information across devices.
- Designed a scalable PostgreSQL database with Prisma and deployed the application using Docker and AWS, following modern full-stack development practices.
- Implemented automated testing and CI/CD pipelines to ensure reliable deployments, maintainability, and consistent code quality.

Blockchain E-Voting System

Node.js, Express.js, Solidity, Ethereum Sepolia · live demo: pantry.alexmercer.dev · code: github.com/alexmercerdev/pantry

- Designed and built a secure, transparent e-voting platform using smart contracts to automate voter registration, vote casting and result tallying.

EDUCATION

BSc (Hons) Information Technology — First Class, Middlesex University

July 2025

Relevant modules: Advanced Software Engineering, Full Stack Development, Defensive Security, Strategic Information System. Final year project: Developed an Adaptive Cloud-Based Note-Taking System using AWS Lambda, API Gateway, DynamoDB, Cognito, and CloudWatch.

Advanced Diploma in Software Engineering - Distinction (Top 7%)

Aptech Computer Education, New Delhi, India 2019 -2021

Certifications: AWS Certified Cloud Practitioner (2025); The Odin Project — Full Stack JavaScript (2023)

OTHER

- Co-ran a weekly coding club teaching JavaScript basics to around 20 junior secondary students.
- Participated and completed Civil Service Graduate Aspiration Programme.
- Volunteer for volunteers on wheels delivering foods, toys and clothing to different hubs.
- Passionate about Diversity & Inclusion; experience working within diverse, multicultural teams both in the UK and abroad.
